| <b>A. Maimaar standard mezzanine:</b><br>Supply normally includes support <b>columns</b> , primary <b>beams</b> , secondary <b>joists</b> and a <b>0.7mm galvanized steel deck</b> that supports a <b>reinforced</b> concrete slab (slab by others). The steel deck acts as a shuttering that carries the weight of the slab during construction only. The concrete slab must contain steel reinforcements and must be designed by a structural engineer to support all the applied loads on the mezzanine. Please refer to Maimaar’s “MEZZANINES” brochure for more details of standard Mezzanine. |                                      |      |            |       |                        |                          |                                  |                                                      |                    |
| <b>B. Mezzanine with Precast slab or hollow core slab supplied by others:</b><br>No deck is supplied in this option. Steel columns, primary beams and some connecting joists are supplied.                                                                                                                                                                                                                                                                                                                                                                                                          |                                      |      |            |       |                        |                          |                                  |                                                      |                    |
